PARTICIPANT INFORMATION SHEET

Title: Measuring Student Attitudes about Generative AI
Principal Investigator: Ehsan Hoque

This form describes a research study that is being conducted by Dr. Ehsan Hoque from the University of Rochester's Department of Computer Science. By participating in this study, you are consenting to the following. You may download or save a copy of this consent form for your records. After reading the document, if you are willing to participate in the study, please check the box that you have read and consent to participating in the study.

The purpose of this study is to understand student attitudes about generative AI. As a participant, you will answer a series of short questions, receive information about the potential university policies, and then interact with other students in a discussion of opinions on the policy. We cannot tell you every detail of this study ahead of time, but if you are willing to participate under these conditions, we will explain the procedure to you fully after your participation, and you will have the right to withdraw your consent at that time. If you withdraw your consent, your personal information will be deleted. If you withdraw consent after completing the study, you will still receive payment for your time. However, if you fail our attention checks embedded within the study, you will not receive compensation.

During this conversation, you will not enter any personally identifiable information (PII) about yourself or any other person. The dialogues will go through a thorough anonymization process, and they will be released publicly with our academic paper. The data will not be shared outside the approved research team except as required for research oversight or by law. The data will be held securely and safely until the expiration of the IRB pertaining to this study.

Key Information:

- You will interact with another student about a potential AI policy considered by your university.
- Each participation takes about 15 – 30 minutes.
- Risks are minimal.
- You will be compensated for your time within one week of the study's completion.
- Participation is voluntary, and you may stop at any time.
- Your anonymous conversation transcript will be automatically analyzed for scientific findings.
- Anonymous excerpts from the dialogues may be used in scientific papers and presentations.

Details

It will take about 10 - 30 minutes to complete the study. By logging into the website, you will see a consent form, instructions, and an automated progression through the study where you will

answer short questionnaires, and engage in a virtual conversation with other students. Your task is to discuss the potential AI policy your university system is considering.

The risks of participation are minimal. The interaction with the other participant may be upsetting and may cause discomfort, but you have the option to report content that you think is harmful/ upsetting/ or causing you discomfort.

This study will use external resources to collect your research data that is password protected, and therefore, only the research team will have access to your research data. We reiterate that the transcribed dialogues may be released publicly after anonymization. The data collected will be used for analysis and future research as appropriate.

There are no expected benefits for your involvement in the study.

The University of Rochester makes every effort to keep the information collected from you private. To protect the confidentiality of the data, responses will be transmitted in an encrypted format (readable only to the research team). Your ProlificIDs will not be included with your study responses or the study's data set.

Identifiable participant data (email addresses, identifiable speech, identifiable transcripts, and ratings linked to an individual) will not be used for any research not approved by the IRB of record. Rochester may, however, retain aggregated transcripts, ratings, and conversation from the interactions — with names, email addresses, and other direct identifiers removed from the content — for future use in improving related AI models. Such improvements may have research and development applications. The use of your data may also lead to products or services with commercial value. You will not share in any commercial profit resulting from the use of your information.

Your participation in this study is completely voluntary. You are free not to participate or to withdraw at any time, for whatever reason. If you withdraw, your data will be deleted and not used. Refusing to participate will involve no penalty or loss of benefit to which you are otherwise entitled. You will receive your compensation within one week of the study's completion, allowing time for researchers to validate your full participation.

For more information or questions about this research you may contact: Dr. Ehsan Hoque at mehoque@cs.rochester.edu. Please contact the University of Rochester Research Subjects Review Board at 265 Crittenden Blvd., CU 420628, Rochester, NY 14642, Telephone (585) 276-0005 or (877) 449-4441 for the following reasons:

- You wish to talk to someone other than the research staff about your rights as a research subject;
- To voice concerns about the research.
